1.0 Introduction

Green Foods Market, a locally owned and operated fresh produce business, in Glassboro, New Jersey provides both in-store and online shopping platforms that allow customers to shop for groceries, including fresh vegetables and fruits and provides a convenient delivery service.

1.1 Objective

The purpose of this Business Continuity Plan (BCP) is to develop a comprehensive approach to guarantee that the Green Foods Market can remain operational during and after an emergency. In the event of unexpected interruption or disasters, employees are to follow the procedures outlined throughout this plan to minimize the negative impact on the company.

2.0 Business Impact Analysis

The Business Impact Analysis (BIA) is important for finding and prioritizing essential business functions, assessing potential threats, and determining the potential downtime that each function can tolerate before it significantly impacts the business.

2.1 Business functions

To reduce operational disruption and financial loss, several essential company functions must be preserved. Below is a list of each function that is necessary to maintain operational continuity.

Business Function	Description
Sales	Ensuring customers can purchase items in-store and online.
Inventory Management	Tracking stock levels and managing fresh produce supply.
Payment System	Secure processing of transactions.
Supply Chain	Continuity in the availability of fresh produce from suppliers.
Refrigeration	Maintains the freshness of perishable items.
Website & Online Ordering	Supports online transactions.

2.2 Threat Identification

The results from the audit and risk assessment completed are detailed in Appendix A. Based on the findings, the following threats have been identified and prioritized:

- **Utility Disruption**
 - Description: This refers to the malfunction of critical business utilities and services such as power, water, internet, telephone, and HVAC systems.
 - Possible Causes: This can result from natural disasters (such as flooding), fire incidents, or equipment failure.
 - Impact: Major business disruptions leading to loss of revenue and unsatisfied customers.
- **Network Infrastructure Failure/ Cloud Service Outage**
 - Description: Refers to the interruption such as internet connectivity, cloud services, and internal network access.
 - Possible Causes: This could result from hardware failure, software issues, network infrastructure outage or disruption of service from third party provider.
 - Impact: This would affect the business severely as it serves customers using the online platform and would result in revenue loss and customer satisfaction.
- **Store Unavailability**
 - Description: Physical access to the store is restricted due to structural, environmental, or safety-related issues.
 - Possible Causes: Unavailability may result from natural disasters like storms or flooding and fires.
 - Impact: Potential damage to goods, building infrastructure, essential equipment (e.g. POS system, refrigerator), and significant loss in revenue.
- **Supply Chain Disruption**
 - Description: Delays in the delivery of goods from suppliers, affecting product inventory and availability.
 - Possible Causes: Severe weather is affecting the fresh produce supplies from farmers or delivery issues such as strikes by transportation workers.
 - Impact: This could result in a shortage of fresh produce.
- **Data loss or Cybersecurity Incident**
 - Description: A cyberattack or data loss compromising customer data, operational data, or business systems.
 - Possible Causes: Risk may be a cause of phishing attacks, malware and ransomware infections, weak password practices, insufficient security measures, and insider threats from negligent or malicious employees.
 - Impact: Potential impacts include exposure of sensitive customer information, disruptions to POS and online system, and financial losses from recovery costs and lost sales.

2.3 Maximum Tolerable Downtime

The table below lists the essential business functions along with their defined Maximum Tolerable Downtime (MTD), which is the maximum duration a function can be disrupted before causing significant impact on the business.

Business Function	Description	MTD
Sales	This function is essential for generating revenues through in-store and online purchases.	24 Hours
Inventory Management	Ensures product availability, reduces waste from spoilage, and maintains efficient restocking.	48 Hours
Payment System	Allows secure and reliable payment processing for both in-store and online transactions.	24 Hours
Supply Chain	Coordinates timely receipt of goods from suppliers, ensuring stock levels meet customer demand.	72 Hours
Refrigeration	Maintains the freshness of perishable items; critical to prevent spoilage and waste.	8 Hours
Website & Online Ordering	Enables customers to browse products, place orders, and select delivery options online.	24 Hours

Business Function, Description & MTD

2.4 Assets and Resources

The table below highlights the key assets and resources critical for Green Foods Market to sustain its business operations. These assets have alternative options in case of failure which can be found in Appendix D.

Asset	Description	Alternative
Power	Provides electricity for the building, powering all POS systems, refrigeration units, etc.	Backup Generators: Use backup generators to power critical systems in case of an outage.
Point of Sale (POS) System	Physical system for in-store transactions.	Tablet-based Backup POS System: Equip staff with tablet-based POS to serve in-store customers
Computers	Essential for inventory management and managing daily operations.	Backup Laptops: Backup laptops can be used in case of computer failure.
Refrigerator	Use for storing perishable goods such as produce, dairy, and meat	Refrigerated Trucks: Rent a refrigerated truck to store perishables temporarily on-site.
HVAC System	Regulates temperature and humidity	Portable Air Conditioners/Fans: The use of portable units can be used in critical areas.
E-Commerce Platform	Supports online customer transactions.	Manual Ordering System: Use email or phone-based ordering to take customer orders temporarily.
Delivery Vehicles	Used for home deliveries of orders placed online.	Rental Vehicles: Rent delivery vans on a short-term basis.

List of Assets and Replacements

3.0 Strategy Development

In this section, we outline specific, actionable steps to ensure a clear and coordinated response to potential incidents. Each task is assigned to a responsible party, with detailed instructions on how actions should be conducted.

3.1 Continuity Plans and Scenarios

In the case of a disaster, the manager/ owner should evaluate what has been compromised by the threat and identify the corresponding scenario. This document currently covers the following scenarios:

1. **Utility Disruption** – refers to the interruption or unavailability of essential utilities required for store operations, including power, water, internet, telephone, and HVAC systems.
 - a. Natural Disasters: Storms, flooding, lightning strikes
 - b. Accidental Damage: Equipment failure, human error, power surge
 - c. Malicious Activity: Insider threat, cyberattacks.
2. **Network Infrastructure Failure/ Cloud Service Outage** – refers to the disruption or unavailability of critical digital resources necessary for store operations, such as internet connectivity, cloud services, internal network access.
 - a. Natural Disasters: Severe weather such as storms and flooding.
 - b. Accidental Damage: Human error, device failure
 - c. Malicious Activity: Cyberattacks, insider threat.
3. **Store Unavailability** - This scenario involves the inability to access physical retail locations due to various disruptive events, which can lead to loss of revenue and impact on customer satisfaction.
 - a. Natural Disasters: Floods, fires, severe storms
 - b. Accidental Damage: water leaks, fire, structural damage
 - c. Malicious Activity: Arson, vandalism, theft
4. **Supply Chain Disruption** - this scenario involves interruptions or delays in the supply chain that affect the availability of fresh goods necessary for business operations.
 - a. Natural Disasters: Storms, flooding
 - b. Accidental Damage: Human error, equipment failure, transportation accident
 - c. Malicious Activity: Theft, hijacking,
5. **Data loss or Cybersecurity Incident** - this scenario involves unauthorized access or exposure of sensitive customer and business data which can lead to data loss.
 - a. Natural Disasters: Flooding, fire
 - b. Accidental Damage: Human error, security vulnerability
 - c. Malicious Activity: Insider threat, social engineering, ransomware attack

3.2 Utility Disruption

Objective: To ensure continuity of operations and protect critical business functions in the event of a utility disruption, including loss of power, water, or other essential services.

Scope: This applies to all utility services critical to business operations, including electrical supply, water, and HVAC systems.

3.2.1 Implementation Plan

Should a power outage occur or should a utility system fail for any reason, the following steps must be followed.

Step 1: Formation of Response Team – Begin a Disaster Declaration	
Who	The manager or designated store clerk if the manager is unavailable.
What	Identify the utility service disrupted and determine the cause of the disruption if possible.
When	As soon as utility loss is detected.
How	Using the contact list provided in Appendix B
Where	Assessment is conducted in-store, or remotely if the store is inaccessible.

Step 2: Contacting and Notifying the Relevant Utility Company	
Who	The manager or designated store clerk if the manager is unavailable.
What	Notify the utility company about disruption of service and activate backup generator to power critical systems.
When	Immediately after confirming power loss, water disruption.
How	Use contact information provided in Appendix B.
Where	Communication can be managed from the store or any location with cell coverage.

Step 3: System Recovery	
Who	The IT support team
What	Initiate and execute the system recovery process to restore operations.
When	Immediately after power is restored to the building
How	Restoring systems to latest backup on the recovery timeline.
Where	The IT support team can remotely conduct recovery actions, or on-site for systems requiring physical access.

3.3 Network Infrastructure Failure/ Cloud Service Outage

Objective: Ensure continuity of operations and maintain uninterrupted access to essential services and functions in the event of network infrastructure failure or cloud service outages.

Scope: Applies to all network components, cloud services, and related systems critical to business operations. This includes local area networks (LANs), cloud-based applications, and any other services that rely on internet connectivity for functionality.

3.3.1 Implementation Plan

In the event of a network infrastructure failure or cloud service outage, the following steps need to be taken.

Step 1: Declare Emergency and Mobilize IT Support Team	
Who	The owner/ manager or designated store clerk if the manager is unavailable.
What	Contact and notify the IT support team about the disruption or issue
When	Immediately upon recognizing network issues/ failure or upon confirming cloud outage
How	Using the contact list provided in Appendix B, contact the IT support team via a telephone call
Where	Telephone calls can be conducted from the store or any location that has cell service.

Step 2: Diagnose Issue	
Who	IT support or designated IT support representative
What	Diagnose the issue and contact the Internet Service Provider (ISP) if the problem is external. If the cloud service is down the IT support begins a diagnostic.
When	Immediately upon being notified about the network failure or connectivity issues and immediately upon confirming the outage.
How	Reference ISP contact details in Appendix B. If it is a cloud service issue the IT support team is responsible for resolving the issue.
Where	IT personnel can coordinate from any location with internet access to ensure a timely response.

Step 3: Verify the Issue is Resolved	
Who	IT support team or designated representative
What	Confirm that network connectivity or cloud service functionality is fully restored, and all affected systems are operational.
When	Immediately after the issue is reported as resolved by the ISP or after completing cloud service troubleshooting
How	Perform tests to ensure they are functioning properly.
Where	Verification can be conducted remotely or on-site

3.4 Store Unavailability

Objective: Ensure continuity of operations and maintain access to essential services in the event the physical store location becomes unavailable

Scope: Applies to all scenarios that may render the physical store location inaccessible, including natural disasters, infrastructure damage, or public health crises.

3.4.1 Implementation Plan

In the event of store unavailability, the following steps should be followed.

Step 1: Begin a Disaster Declaration	
Who	The owner/manager or a delegate if the owner/manager is unavailable.
What	Communicate a message to all employees that the physical location is inaccessible while also informing them of the setting up of a temporary mobile retail unit.
When	As soon as it is determined that the physical store location is unavailable.
How	Using communication methods such as telephone calls, text message or email.
Where	Coordination can occur from any location with internet access, enabling a swift and effective response to the situation.

Step 2: Establish Mobile Retail Unit	
Who	The owner/ manager or designated store clerk if the manager is unavailable.
What	Establish a mobile retail unit to facilitate ongoing business operations.
When	As soon as the building is deemed unsuitable for use.
How	Obtain necessary permits and comply with local regulations for operating a temporary sales unit. Stock the mobile unit with fresh produce based on customer demand. Promote the mobile retail unit through social media and local advertising to inform customers about its location.
Where	The mobile retail unit can operate in high-traffic areas to maximize visibility and accessibility for customers.

Step 3: Update Inventory Management	
Who	The owner/manager and store clerk.
What	Ensure that inventory management is updated to allow online customers to shop effectively.
When	Immediately upon establishing the mobile retail unit and throughout the operational period to reflect any changes in stock levels.
How	Regularly monitor stock levels in the mobile retail unit and record any sales made through online orders. Use inventory management software or systems to update product availability in real time.
Where	Inventory updates can be conducted from the mobile retail unit or remotely through a connected device with access to the inventory management system.

3.5 Supply Chain Disruption

Objective: To ensure continuity of operations when supply chain interruptions or delays affect the availability of essential fresh goods.

Scope: This plan applies to all aspects of the supply chain that are critical to business operations such as fresh goods and product supplies from vendors.

3.5.1 Implementation Plan

In the event of a supply chain disruption, the following steps should be taken.

Step 1: Assess the Situation	
Who	The owner/ manager or designated store clerk if the manager is unavailable.
What	Evaluate the extent of the supply chain disruption and identify which products or suppliers are affected.
When	Immediately upon recognizing a disruption in the supply chain.
How	Conduct an inventory check to determine current stock levels of fresh goods and identify shortages.
Where	Assessment can be conducted at the store location or remotely

Step 2: Contact Vendor	
Who	The owner/ manager or designated store clerk if the manager is unavailable.
What	Reach out to affected vendors to discuss issues and obtain updates on product availability and delivery timelines.
When	As soon as the supply chain disruption is assessed.
How	Use the vendor contact list included in Appendix B to reach out via telephone or email.
Where	Contact can be made from the store, home, or any location with phone access.

Step 3: Contact Alternative Vendor	
Who	The owner/ manager or designated store clerk if the manager is unavailable.
What	Reach out to alternative vendors to source necessary fresh goods that may be unavailable due to the disruption.
When	Immediately after assessing the supply chain disruption and determining that current vendors cannot meet supply needs.
How	Review the list of alternative vendors maintained in Appendix D.
Where	Communication can occur from the store, home, or any location with phone connectivity.

3.6 Data Loss or Cybersecurity Incident

Objective: To effectively respond to data loss or cybersecurity incidents, ensuring the protection of sensitive information, minimizing operational disruption, and ensuring quick recovery.

Scope: This plan applies to all data systems, networks, and digital assets within the organization. It encompasses incident detection, reporting, response, and recovery.

3.6.1 Implementation Plan

In the event of a supply chain disruption, the following steps should be taken.

Step 1: Identify the Incident	
Who	The IT support team
What	Assess the situation to determine the nature and scope of the data loss or cybersecurity incident.
When	Immediately upon discovery or notification of the incident.
How	Conduct a preliminary investigation to identify affected systems, data, and potential vulnerabilities.
Where	Assessment can be conducted from the office, remote workstations, or any secure location with access to the affected systems.

Step 2: Contain the Incident	
Who	The IT support team
What	Take immediate actions to contain data loss or cybersecurity incidents and prevent further damage.
When	As soon as the incident is identified and assessed.
How	Disconnect affected systems from the network to prevent the spread of malware or unauthorized access.
Where	Containment actions can be initiated from the office or remotely, depending on the location of the affected systems.

Step 3: Investigate and Analyze the Incident	
Who	The IT support team
What	Conduct a thorough investigation to analyze the cause of the incident and assess the extent of data loss or breach.
When	Immediately after ensuring containment of the incident.
How	Review system logs, access records, and security alerts to identify the origin and method of the breach or data loss.
Where	The investigation can take place in the office or remotely, using secure systems to analyze data and logs related to the incident.

4.0 Training and Awareness

1. **Emergency Response Training:**
 - a. All employees will participate in annual training sessions focused on emergency procedures relevant to their roles. This includes fire safety, evacuation protocols, and response to natural disasters.
2. **Communication Protocols:**
 - a. Employees will learn how to communicate during an emergency, including:
 - i. whom to contact (owner/manager, emergency services, etc.).
 - ii. How to relay essential information clearly and concisely.
3. **Role-specific Training:**
 - a. Training will be tailored for distinct roles:
 - i. **Store Clerks:** Focus on customer evacuation and safety.
 - ii. **Delivery Drivers:** Emphasis on reporting incidents and ensuring safe delivery practices.
 - iii. **Owner/Manager:** Training in overall crisis management and decision-making.

4.1 Communication

Media Communication	
Who	The owner/ manager serves as the primary representative for media interactions. If they are unavailable, a designated store clerk will take on this role.
What	Speak to the media and respond to any questions they may have.
When	Media communications should be conducted once essential facts have been verified
How	The owner/ manager or the designated representative should provide clear, factual information, and refrain from speculation.
Where	Media interactions may take place in a designated area, or remotely via phone or video conference if more convenient.

Law Enforcement Communication	
Who	The owner/ manager serves as the primary representative for media interactions. If they are unavailable, a designated store clerk will take on this role.
What	Communicate necessary information regarding incidents or concerns that may involve law enforcement
When	Should occur immediately following any incident that may require their involvement, ensuring that the authorities are informed
How	The owner/ manager or the designated store clerk should provide concise information and cooperate fully with law enforcement requests,
Where	Communications can take place on-site at the store, through phone calls or at the law enforcement office, depending on the nature of the situation.

Public Communication	
Who	The owner/ manager serves as the primary representative for media interactions. If they are unavailable, a designated store clerk will take on this role.
What	Provide information to the public regarding business operations, updates, and any relevant events or incidents affecting the store.
When	As soon as relevant information is available, particularly after significant events that may impact the business operations.
How	Public communications can be delivered through various channels, including social media, the store's website, and emails.
Where	This can be completed at the store or any place providing internet access.

Client Communication	
Who	The owner/ manager serves as the primary representative for media interactions. If they are unavailable, a designated store clerk will take on this role.
What	Communicate important information regarding products, services, and respond to inquiries and address concerns promptly.
When	Particularly in response to inquiries or feedback.
How	Communications can be conducted via emails or phone calls that ensure responses are timely and informative
Where	This can be completed at the store or any place providing internet access.

4.2 Emergency Declaration and Resolution

Emergency Declaration Process

- 1) **Assess the Situation:** The owner/manager assesses the situation to determine whether it is an emergency that may interfere with business operations, such as a serious incident impacting store safety or online functionality.
- 2) **Declare an Emergency:** Upon confirmation of an emergency, the owner/manager will declare the situation to activate the Business Continuity Plan (BCP).
- 3) **Notify Key Personnel:** The owner/manager informs essential staff, including store clerks and delivery drivers, about the emergency declaration.
- 4) **Mobilize the Response Team:** Mobilize the response team to begin conducting the essential steps in the BCP, ensuring that all staff understand their designated roles.
- 5) **Document the Declaration:** Ensure that the declaration details are logged in the company's records for accountability and future use.
- 6) **Execution of BCP:** Conduct the necessary actions outlined in the Business Continuity Plan.

Emergency Resolution Process

- 1) **Monitor and Evaluate:** Regularly evaluate the situation and the effectiveness of the response to maintain safety and ensure operational stability.

- 2) **Determine Resolution:** After the threat has been addressed and operations are back to normal, prepare to announce the conclusion of the emergency.
- 3) **Declare Resolution of Emergency:** The owner/manager officially announces the conclusion of the emergency.
- 4) **Communicate Resolution:** Inform all employees and relevant stakeholders, including clients and vendors, about the conclusion of the emergency and the measures being taken to resume normal operations.
- 5) **Review and Document:** Summarize the management of the emergency, highlight key lessons learned, and record outcomes to inform future improvements.

5.0 BCP Testing and Maintenance Schedule

- 1) Annual BCP Review
 - a. **Relevant Personnel:** The Owner/Manager.
 - b. **Activities:**
 - i. Ensure that all changes are accounted for.
 - ii. Document findings from any past incident as well as from testing conducted.
 - iii. Update training materials to reflect any changes in procedures or responsibilities.
 - c. **Documentation:** All changes must be recorded in the version history table, and the updated plan should be shared with all employees.
- 2) Bi-annual Tests
 - a. **Relevant Personnel:** All employees, led by the Owner/Manager.
 - b. **Activities:**
 - i. Evaluate the effectiveness of the current BCP and identify any areas for improvement.
 - ii. Conduct drills or simulations to evaluate response strategies and team readiness.
 - iii. Review and revise risk assessments to account for any new threats or vulnerabilities.
 - c. **Documentations:** Record the challenges, achievements, and insight gained from each exercise, and utilize this information to improve the Business Continuity Plan (BCP).

6.0 Conclusion

The Business Continuity Plan (BCP) for Green Foods Market is developed to guarantee the flexibility and sustainability of operations in the event of unexpected disruptions. Potential risks such as supply chain disruptions, data loss, cybersecurity incidents, and physical office unavailability were identified, and actionable steps were documented to maintain essential functions while safeguarding sensitive information at the same time.

Outlined in this BCP are detailed steps guiding responsible personnel for immediate response to an emergency or disruption to critical business function. This proactive approach can quickly help the business to manage and recover from incidents, by minimizing operational downtime.

Regular testing of the BCP and training of employees is conducted to ensure all staff understand their designated roles and responsibilities during an emergency. Reviews and updates are also conducted to ensure the BCP is up to date and reflects any necessary changes in personnel, threats or response measures.

Implementing the BCP during an emergency will enable the Green Foods Market to overcome inconvenient situations and ensure continued service to valued customers. This guide also ensures that critical business functions are reverted to normalcy while serving our valued customer through the process.

7.0 Version History Table

The table below includes the revision history for this document.

Version	Author	Date	Changes
v1.0.0	John Smith	10/22/2024	First Draft
v1.1.0	John Smith	10/28/2024	Reviewed by owner/manager
v1.2.0	John Smith	11/02/2024	Version approved by the owner/ manager

Revision History Table

Acronyms

BCP: Business Continuity Plan

BIA: Business Impact Analysis

HVAC: Heating, Ventilation, and Air Conditioning

ISP: Internet Service Provider

IT: Information Technology

LAN: Local Area Network

MTD: Maximum Tolerable Downtime

POS: Point of Sale

WAN: Wide Area Network
